Subject: Request for Pictou Pulp mill proposed pipeline to have full EA

Dear Minister:

Canada's worst polluting pulp Mill, one that has been able to download its pollution liability on us the people of Nova Scotia, should not be allowed to start a new era of pollution with their proposed effluent pipeline. At the very least a full EA is required, and a closed loop system that discharged no toxic waste into the environment.

Furthermore the company should be on the hook for its existing pollution at Boat Harbour and its terrible air pollution the mill causes daily.

The time is over for letting Canada's worst polluting pulp mill have a free ride, if they want to stay in business they need to clean up their act to the best standards and not one bit less.

We look forward to hearing from you on this.

Neal Livingston
